Dräger BabyFlow® plus
Consumables and Accessories

A non-invasive respiratory support system designed to maximize performance and patient comfort.

D-49841-2015

PERFORMANCE

The BabyFlow plus respiratory support system was designed based on the results of state-of-the-art technology (Computational Flow Analysis) to minimize the imposed work of breathing for the patient. The streamlined adapter head optimizes the flow distribution.

ENHANCED COMFORT FOR PATIENT AND CAREGIVER

We want your patients to feel comfortable. The less discomfort a patient experiences, the greater the opportunity for healthy growth and development during this critical time in the patient's recovery.

The adjustable angle allows you to fit the prongs and masks properly on the patient, thus reducing leaks and providing more stable CPAP levels. More stable CPAP levels reduce noise levels, making BabyFlow plus a low noise level respiratory support system, therefore, supporting Developmental Care practices and offering the best possible therapy for tiny patients.*

EASE OF USE

The ease of use of BabyFlow plus in combination with innovative components offer effective and gentle therapy where it's needed.

The BabyFlow plus respiratory support system is designed to address the current issues with non-invasive respiratory support therapy. Every single component, including individually sized masks and nasal prongs, has been engineered to maximize performance and patient comfort.

The flexible, kink resistant hoses enable optimal positioning of the patient. Swivel connectors reduce the necessary disconnections of the breathing circuit to a minimum, thus ensuring stable CPAP pressures.

In combination with the Dräger Babylog® VN500, the BabyFlow plus supports a comprehensive selection of modalities for non-invasive respiratory support. Babylog VN500 automatically adjusts the flow according to the existing leaks to ensure stable CPAP pressure and prevent nuisance alarms.
